

This document describes the optimal Advanced Performance Settings for SiteWatch servers.

On most server, best performance is obtained by making the following changes to the server's Advanced Performance Settings.

1. Open Control Panel.
2. Click System.
3. In the **System Properties** panel, click the **Advanced** tab.
4. In the **Performance** box, click the **Settings** button.
5. In the **Performance Options** panel, click the **Advanced** tab.
6. In the **Processor scheduling** box, click the **Background services** radio button.
7. In the **Memory usage** box, click the **Programs** radio button.
8. Click the **OK** button.
